

Binar Elektronik AB and Binar Iterocon AB is now

# Binar Solutions AB

# **BINAR**

*Improving your productivity*

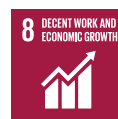

# Creating solutions

We are revolutionizing production technology worldwide. We have advanced know-how in production technology and industrial IT. Together with you we want to error proof your production and improve your productivity long-term to increase your profit and secure your existence.

The company was founded in 1984, and in 2021 we changed our name to Binar Solutions AB, as a clear statement that we offer full solutions and not just electronics. We provide industrial IT and electronics as support systems for Lean Manufacturing, MES for automation, complete test systems, robust connectors and development of special tools to secure quality and traceability in the production.

We are ISO 9001 and ISO 14001 certified and always strive to meet the UN global Sustainable Development Goals.

This is our way of contributing to parts of the Global Goals for sustainable development. In this way, we want to do our part of the work for a better tomorrow. You can read more about the goals at [www.globalgoals.org](http://www.globalgoals.org).

# We focus on four segments

## Lean Production

BPS (Binar Production System) features a flexible and modular manufacturing system, easy to integrate with any ERP system.

- Error proofing
- Visualisation
- Takt & Andon
- Digital instructions
- Traceability
- Customize

## Smart Tools

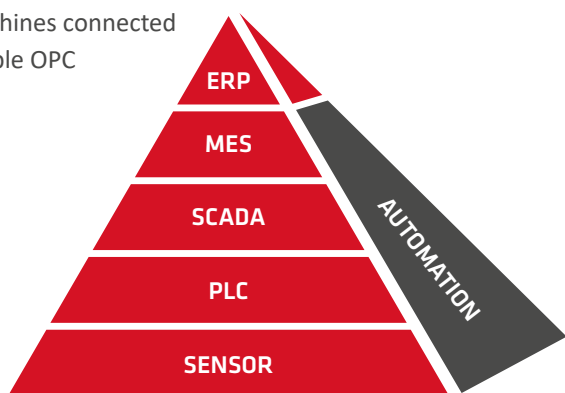

We want to be your long-term partner for smart and cost-efficient production tools – to help secure production and prevent quality problems.

- Our engineers create solutions for client specific tools
- We have many reference projects, we never start from scratch
- We design complete solutions, including circuit boards, software, and mechanics
- The smart tool can be connected to your production system
- Our production is specialized in small series
- We provide excellent after-market support for re-creating tools

## System Integration

Binar uses our BPS MES system to automate and optimize the production process.

- The system bridges the gap between the ERP system and factory I/O
- The Binar MES acts as a backbone between the ERP and all your machines
- Binar adopts the system so it communicates with your ERP, PDM, other MES systems as well as robots, laser cutting machines, CNC or other machines connected via for example OPC

## Test Systems

Binar develop and supply customized production test systems to ensure function of sub assemblies, before it is mounted to the main assembly.

Since partnering up with our former supplier we construct our own custom fit robust connectors and can deliver complete test systems including cables.

### Custom fit Robust Connector

- Presence sensor
- LED indication
- Spring-easily replaceable pins
- Reliable connection
- Leaves original connector virgin

**Tillverkning av:**  
Maskiner • Fixturer • Prototyper • Verktyg  
Verktygsdetaljer • Reservdelar
