

FÅRBO MEKANISKA AB

**OUR QUALITY
– YOUR SECURITY**

TOTAL SOLUTIONS OF THE HIGHEST QUALITY

At Fårbo Mekaniska we develop together with our customers, so that we can offer complete solutions that match existing needs. Through constant expansion and new investments, we are always at the forefront.

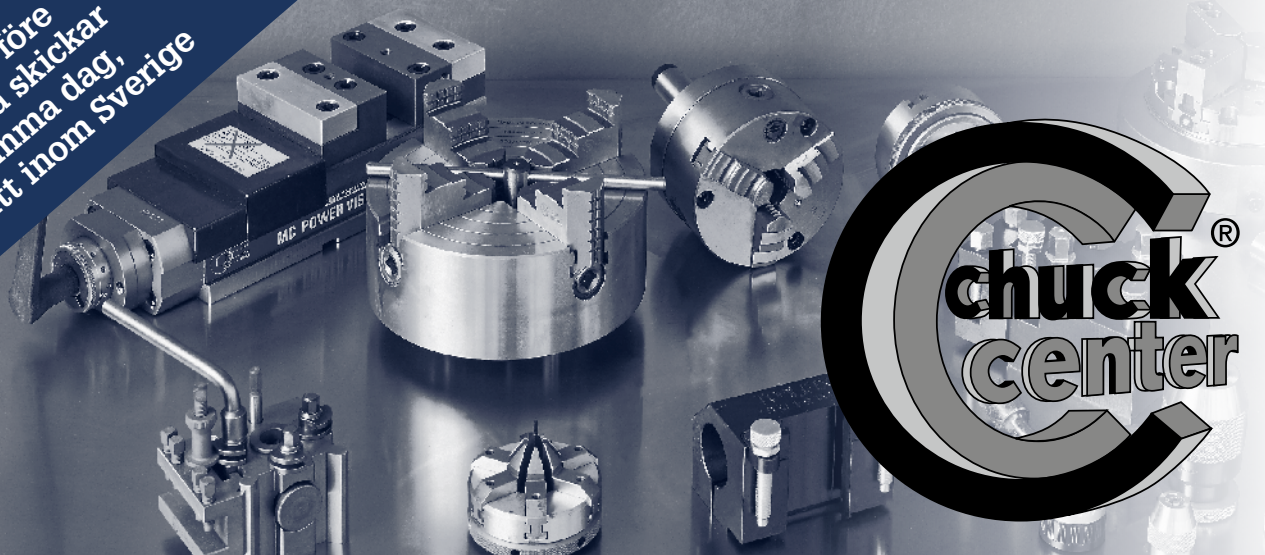

In recent years we have expanded our production area to a total of 4 800 square meters. We have expanded the goods reception area by 200 square meters for the warehousing of our customers' products up to delivery. Today we also have a separate milling section of 300 square meters. We are constantly investing in new machines and automation equipment.

We make these investments in order to offer the best possible quality and delivery precision. At the same time we at Fårbo Mekaniska retain the familiar atmosphere, in which our employees thrive together and work towards the same goal. The "we"- feeling of inclusion is, and will always be, the company's main resource.

Welcome to your quality partner!

A COMMITMENT THAT MAKES A DIFFERENCE

By engaging in our customers and carefully examining any problems arising, we maintain a high level of quality in everything we do. We see ourselves as problem solvers, helping our customers to create profitability. Short decision paths, high flexibility and a clear customer focus are some of our guiding-stars in this work.

Putting the customer in focus simply means that we strive to understand our customers' needs and find the best solution. Having a high level of service means good cooperation, repeat business and mutual trust. In the end, it obviously means good business both for the customer and for us at Fårbo Mekaniska.

The important thing is that deadlines are kept; consequently we are careful to observe the agreed delivery times. Our machines are modern and efficient, operational around the clock. Our staff is committed and competent. The production is characterised by short lead times.

We have been conducting customer satisfaction surveys among our customers since 2009. At that time it was the delivery times that customers wanted us to improve. In recent years, their responses have shown that they are satisfied and want us to maintain the good delivery times. Of course, we continue our efforts to develop efficiency, processes and service to maintain our good relationships.

COMPLETE AND EFFICIENT SOLUTIONS

The smoother we can make things happen for our customers, the more time they can spend on their own business. Fårbo Mekaniska is therefore ready and able to offer complete and cost-effective solutions. For example, the expansion of our goods reception facility, with stockholding, shortened delivery times to our customers.

The basis of our being able to offer a complete service is a modern fleet of machinery. Our fleet of machinery is a delight for every workshop floor; there are multi-machines, robots, multi-operational machines and the right skills. In addition to all our specialist machinery, we have a large number of lathes and cutters, both for serial production and for piecemeal production. Simply put, we have what it takes to carry out good quality work with a high level of precision. Please visit our website to get more details about our machines.

We also work with long hole drilling, in dimensions up to 25 millimetres and 1 000 millimetres in length.

INSTALLATION

We also perform different types of installation and assembly assignments. No matter what needs to be screwed together and installed, our skilled fitters can handle it. For example, we perform assembly and installation of Sandvik's smart cabinet, a cabinet that automatically inventories the contents and generates e-mails with orders for the items to be replenished. During installation we also ensure that our customers receive the required training.

78 MACHINERY AT YOUR SERVICE*

- 16 CNC-lathes
- 6 Multi-operation machines
- 7 Spark wire EDMs
- 3 Hole EDMs
- 10 Multifunction machines
- 1 Long hole drill
- 1 End machining machine
- 2 Cutting machines
- 2 Manual lathes
- 3 Flat grinders
- 1 Measuring machine
- 1 Laser measuring machine for axles
- 1 Laser marking device
- 1 Five-axle laser machining machine
- 1 Eccentric press
- 2 Tumbling plants
- 15 Automations
- 5 Bar magazines

*Number at press time. Now there are probably more.

Nu kan du göra det utan en stor investering eller långvarigt åtagande. Du kan nu hyra lagerhållningssystem av Seco till fast månadskostnad, utan bindningstid. Då ingår en fullt funktionerande lösning, inklusive installation, full support, licensavgift, utbildning till er och era användare. Vill du veta mer, kontakta din Secorepresentant.

MEASUREMENT WITH THE UTMOST PRECISION

We and our customers are in complete agreement – we value parts with perfect dimensions, therefore we appreciate when customers request measurement protocols on work performed. The protocols underline our professional skills and that our products are of the highest quality. Of course, we also measure other parts than those produced in-house. By investing in a laser meter, we are now able to offer so-called touchless measurement, yet another step in our pursuit of perfection.

Using the SolidWorks design program we help you as a customer to streamline your daily work by producing material for drawings. If you need to label your parts, we also offer needle embossing and laser marking.

SPARK WIRE EDM

With our seven spark wire machines we can handle all sorts of spark machining with tolerances down to 5 μ m. The size of the pieces can range from a few millimetres to 600 x 800 mm, and a height of 290 mm. Above all, we have employees with extensive experience and high expertise in the field.

171 COOL AGENTS*

*Med 171 produkter erbjuder BECHEM ett brett utbud av högpresterande vattenblandbara eller icke-vattenblandbara skärvätskor för metallbearbetning.

Ny serie med borfria skärvätskor. Processtabila, effektiva, hållbara och med enastående prestanda.

ENVIRONMENT & QUALITY

QUALITY POLICY

Fårbo Mekaniska shall be a reliable supplier of processed products with the right quality delivered in the right time. This implies the following:

- A modern and automated fleet of machinery for cutting machining of products.
- The company's management shall ensure that the quality policy is realised by ensuring that the requirements for operations and products are known. This applies to both legal and customer requirements as well as requirements from other stakeholders.
- Delivered products shall always meet agreed requirements.
- To create opportunities for continuous improvement at all stages.
- Documented rules and procedures shall apply to the business operations.
- Good collaboration and competence shall characterise our business

ENVIRONMENTAL POLICY

Fårbo Mekaniska has a responsibility to the environment as well as to customers, employees, owners and stakeholders. We shall reduce the impact on the environment as far as is technically possible and economically viable.

- We shall at the very least comply with the laws and requirements that stakeholders place on us.
- We shall economise with raw materials, products and energy.
- We shall work together with customers and suppliers focusing on the environment.
- We shall pursue continuous improvements in the business, including having active and updated environmental efforts, and from the environmental point of view prevent pollution by continually evaluating and updating our risks/opportunities.
