QUALITY, EFFICIENCY, DEDICATION AND RELIABILITY

Punches

MORE THAN 70 YEARS OF DEDICATION

Gerdins Cutting Technology's ambition is to be the customer's first choice. With our long experience in tool manufacturing and modern machinery, we solve customer's challenges and problems regarding cutting dies and steel punches.

We know that each customer and product is unique, so together we tailor solutions that fit each individual need. Our business developers help the customer analyse and define productive interfaces and efficient production systems. With our technological development and manufacturing expertise, we strengthen our customer's competitiveness.

This is how we work: with commitment to the customer and high and consistent quality, we strive to create long-term customer relationships.

THE THIRD GENERATION ENTERS THE COMPANY

Gerdins Cutting Technology is a family-owned business, founded in 1952. Yngve Gerdin and his uncle Manfred started a business for forging and bicycle repairs in Mjällom, at the High Coast on a peninsula in the Gulf of Bothnia. They soon started manufacturing punching knives and other tools for the needs in the local shoe industry. This is still how Gerdins works: if the customer has a need, Gerdins will take care of it.

Now the third generation is joining the board to carry on the family tradition. After Yngve's sons Peter and Björn, their children Jenny and Johan enters the company. The family spirit permeates the whole company. Our committed co-workers all contribute to the success of the company. From a small, local mechanical workshop to a high-tech industrial business, Gerdins will continue to focus on Swedish quality and cost-effective solutions for our customers, together with consideration for the environment for a sustainable future.

CUTTING DIES FOR ALL SHAPES

We at Gerdins have a long experience of die cutting in demanding materials. Our cutting tools produce details for the industry with the highest accuracy. Gasket for the automotive industry, a foam interior for box or a detail for the electronics industry, we produce the best tool for you.

WHY CHOOSE A CERTIFIED DIE-MAKER?

Converters need to be confident that their die-makers have the skills, understanding and equipment required to produce high-quality dies.

The BOBST Die-maker Certification Program is a guarantee of excellence. Every BOBST-certified die-maker has been identified as having a positive, forward-thinking attitude towards quality standards, innovation, automation and digitalization, ensuring they possess the mindset and approach to production that converters ask for.

THE WORLD'S MOST AVAILABLE STEEL PUNCHES

Steel punches for the leather industry, shoe industry, packaging industry, automotive industry, paper industry, plastic- and rubber manufacturing industry or sealing industry? Regardless which material you are using or which kind of hole you would like to make, we have the punch for you.

With more than 60 years experience in manufacturing high quality steel punches, we are able to offer fast deliveries of standard products from a stock which comprises more than 2.500 different varieties of punches.

We provide a product range which offers the customer a large flexibility in terms of quantities and design, and what we do not have in our standard product range can be manufactured upon request as a customer solution. Our punches are spread throughout the world via an impressive network of distributors, and we are proud to say that we market the most available steel punches in the world.
