of production space at our premises.

Nitator Stainless Steel –stainless solutions since 1920

Nitator Stainless Steel is based in Helsingborg, and our geographical location allows us to serve both the Swedish and European markets. We are proud to have been providing our customers with innovative and complete stainless steel solutions for over 100 years! Our 7500 m² manufacturing facility ensures competitive solutions from concept to completion.

Our experienced and knowledgeable employees are ready to collaborate with you to develop tailored solutions for your business and provide expert advice throughout and after the process. We strive

to be both your supplier and long-term partner.

With us, you are in safe hands - let us work together to achieve success!

Focusing on the future

As a forward-thinking company, we naturally prioritise the environment in our operations. As a result, we naturally support the United Nations' Global Goals. The goals we're focusing on right now are as follows:

From idea to innovation and complete solutions

We believe that the primary reason we have remained in business for over a century is that we have always valued our customer relationships. This, combined with the fact that we have a fantastic group of employees who are both experienced, competent, and focused on developing creative and innovative tailor-made solutions for our customers, has given us a competitive advantage in the market. When you choose Nitator Stainless Steel as your supplier, we will work with you from the initial idea to the CAD drawing, prototype, and finished machine. Of

course, if necessary, we can produce products made of materials other than stainless steel.

Throughout the journey, we always provide our customers with expert advice to help them create the best possible product, while also allowing you to test the products on-site at our factory in Helsingborg.

When the product is completed and delivered, support and advice are always provided to ensure that you get the most out of your machine.

A satisfied customer since the 1980s

Linde, the world leader in high-quality freezers, has operations in more than 110 countries. Since the 1980s, Nitator Stainless Steel has been a reliable partner in the development of specially designed cryogenic freezers.

Since the collaboration began, Nitator Stainless Steel has delivered more than 1,000 freezers to Linde. Every week, one to two machines leave Helsingborg's production facility and are distributed worldwide. Linde is known for its quality machines that reach down to -196 degrees Celsius and are made of durable, stainless steel. Over time, the partnership has evolved from solely producing machines based on Linde's own designs to allowing Nitator Stainless Steel to oversee the complete manufacturing process. To ensure excellent quality, every Linde machine is put through a rigorous testing process on the factory grounds.

Linde's Martin Kvist and Tobias Nicklasson celebrate the long and fruitful partnership with Nitator Stainless Steel and look forward to more success in the future.

Lechler is a global leader in manufacturing spray nozzles and droplet separators with more than 140 years experience and 40 000 products.

Stainless steel swimming pools for public spaces

We specialise in manufacturing stainless steel pools and basins. As a full-service supplier, we handle everything from concept to 3D construction, manufacturing, and assembly.

With more than 300 pools completed and more than 40 years of experience, we can offer you the most flexible, cost-effective, and technically superior solution for public spaces.

A stainless steel pool sets no limitations. Everything is possible. Furthermore, the material itself exudes an elegant, exclusive, and welcoming vibe. Since stainless steel is tight, easily produced, flexible, hygienic, and affordable, it is perfect for use in public spaces. Furthermore, compared to other materials like tiles, stainless steel requires less upkeep and is entirely recyclable.

Our proficiency in the production and installation of swimming pools puts us among the market leaders. We are capable of creating solutions for any size or purpose of stainless steel swimming pool.

Pools of all sizes

There is no restriction on the size of the pool we can build when you hire us to build it from scratch or renovate an already-existing one. We provide a boom in the centre of the larger pools, which allows you to adjust the length of the pool and add more lanes for swimming if necessary. Among the stainless pools we have created are Karlskoga Simhall, Nyköping Rehab, and Säfte Badhus.

Rune's exciting journey with Nitator Stainless Steel

Rune Newman, Senior Technical Adviser at Nitator Stainless Steel, began his career with the company in Helsingborg in 2007 and has been a key figure in the organisation for over 15 years. As Senior Technical Adviser, he provides support to the technology department, which handles all technical input from the sales department, from customer requests to CAD models, allowing for close collaboration and customer security.

According to Rune, Nitator Stainless Steel sets itself apart by incorporating excellent weld proficiency, documentation management, and marking at the outset of production. The tight relationship the company has with its clients adds even more

distinctiveness, as it gives the clients a sense of security and allows them to participate in the process of developing the product. Because of the employees' enthusiasm and willingness to work together, the company has been able to achieve great success, with each employee contributing their skills to solve problems.

In the future, Rune sees potential for growth through increased internal investment in automation, better production techniques, and digitisation, as well as through extending partnerships. Nitator Stainless Steel is ready to continue investing and developing!

Effektivisera ditt arbete

Axido tillverkar frästa och svarvade detaljer för kundunika system. Våra behovsanpassade lösningar och maskinbearbetade komponenter hjälper dig att säkra ditt materialflöde.

Vi är proffs på produkter med specifika krav och utgår alltid från våra kunders unika behov. I vår mekaniska verkstad producerar vi maskinkomponenter och detaljer med höga krav på kvalitet och funktionalitet.

A world of stainless possibilities

Since 2000, we have manufactured specially adapted machines in our well-equipped workshop, which is comprised of a contemporary machine park and a team of skilled workers, from the initial idea to the completed machine. Our speciality is the production of stainless steel materials. We take on projects where we can contribute right away by offering our professional advice and guaranteeing that the finished product will always be of the highest calibre.

Since 2000, we have supplied stainless steel products all over the world, including machines for water

treatment and nuclear power plants, Linde freezing machines, Rosenqvist potato-making machines, and specially designed stainless steel rooms for our clients.

By employing novel ideas and cutting-edge techniques, we expand our range of products in preparation for an exciting future. Find out how our technical know-how can help and enhance your project while maintaining the best possible quality throughout!

KVALITET OCH MILJÖVÄNLIGA LÖSNINGAR HOS ELBE AUTOMATIC!

Vill du investera i toppkvalitet och samtidigt bidra till en grönare framtid? Då är Elbe Automatic din perfekta partner! Med vår passion för både kvalitet och miljöansvar har vi skapat enastående automatiska lösningar som inte bara överträffar förväntningarna utan även minskar miljöpåverkan.

Från projektledning och konstruktion till installation och support, vi är din pålitliga partner genom hela processen. Med vårt fokus på kvalitet, innova-

tion och service levererar vi skräddarsydda lösningar som ökar effektiviteten och förbättrar produktiviteten i din verksamhet.

Oavsett om du behöver automatlösningar för industriella applikationer eller för ditt privata bruk, kan du lita på Elbe Automatic för att leverera produkter av högsta kvalitet som också tar hänsyn till miljön. Kontakta oss idag för att ta nästa steg mot effektiva, pålitliga och miljövänliga lösningar!
