

BRIGHT
NETWORKS

Your full-service contractor in fiber networks

Welcome to Bright Networks, an innovative company dedicated to construction, service, operation and maintenance of fiber networks. We carry out turnkey contracts in access networks with our own union contract employees active in all sub-areas. This means extra security for our customers, as they get the same partner throughout the entire process.

At Bright Networks, it is our ambition to be the top supplier to network owners with high quality demands, in partnerships where we place great focus on competence and the professionalism of our employees. This is a common thread through the entire company. The founders and staff have many years of experience in the industry, which has made us a leading supplier in fiber networks throughout the Nordics. We invest in being the market leader when it comes to complex work that requires a high level of service.

Bright Networks is divided into three different business units:

Enterprise & Networks | Service, Operations & Maintenance | Consumer.

Our high level of competence makes us a leading entrepreneur in:

- Service, operation and maintenance work in existing access and backbone networks
- Enterprise connections
- Network optimizations
- Network examinations
- Network extensions
- Migration and activation
- Turnkey contracts and installations for private households (SDU)
- Installations for condo associations (MDU)

Sustainability is a matter of course

At Bright Networks, we focus intently and intensively on sustainability. We continuously upgrade our fleet with electric vehicles, prioritize local suppliers and make sure that our employees have a good working environment with the right equipment, skills and conditions. We see it as a privilege to be part of the solution to Sweden's sustainability challenges and work every day to create a better tomorrow both climate-wise and for society as whole.

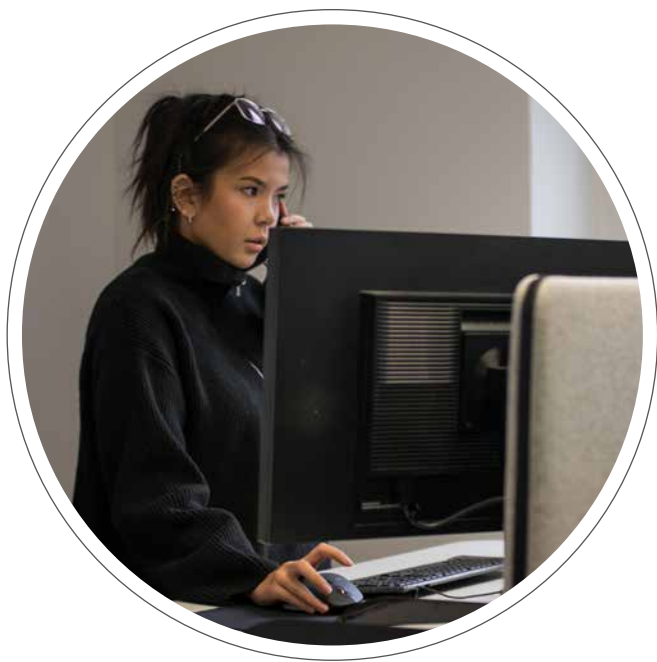

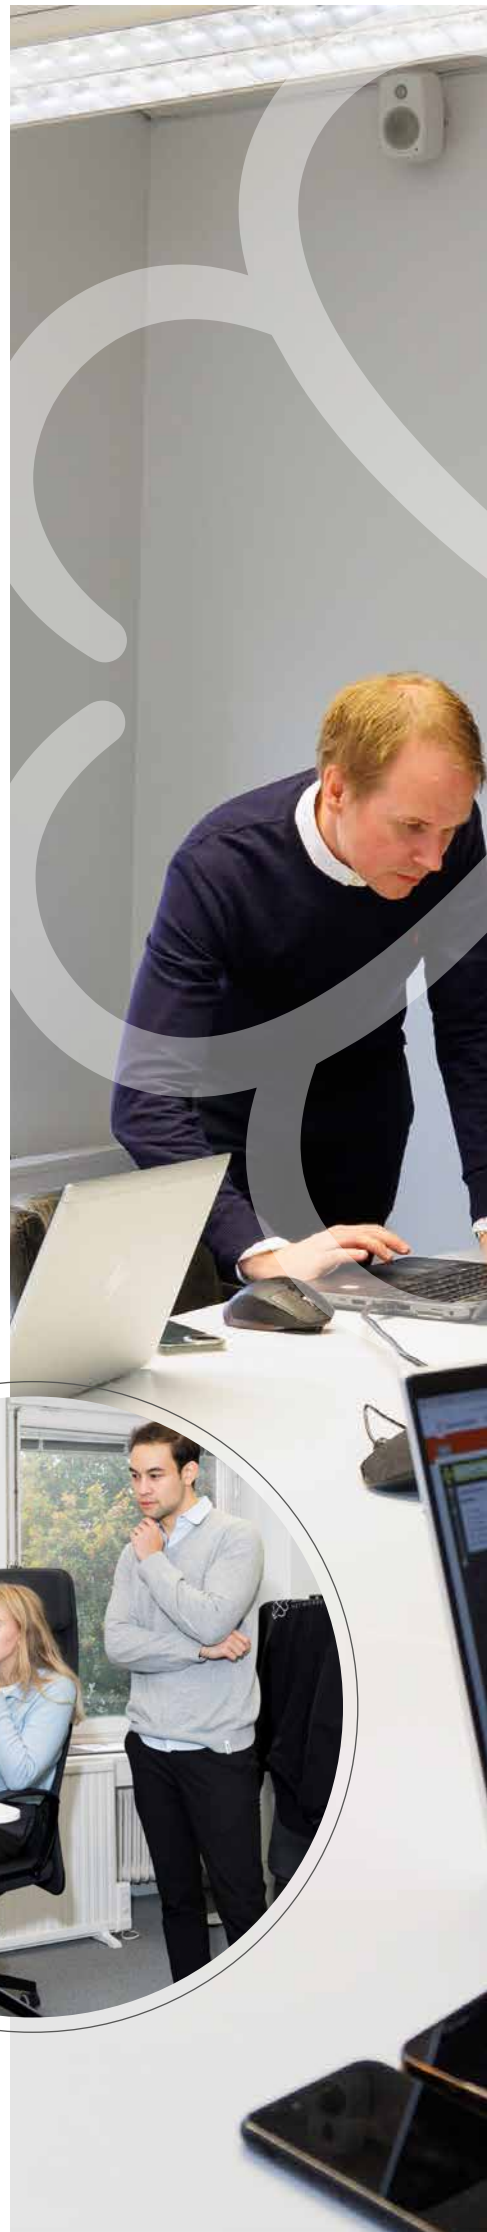

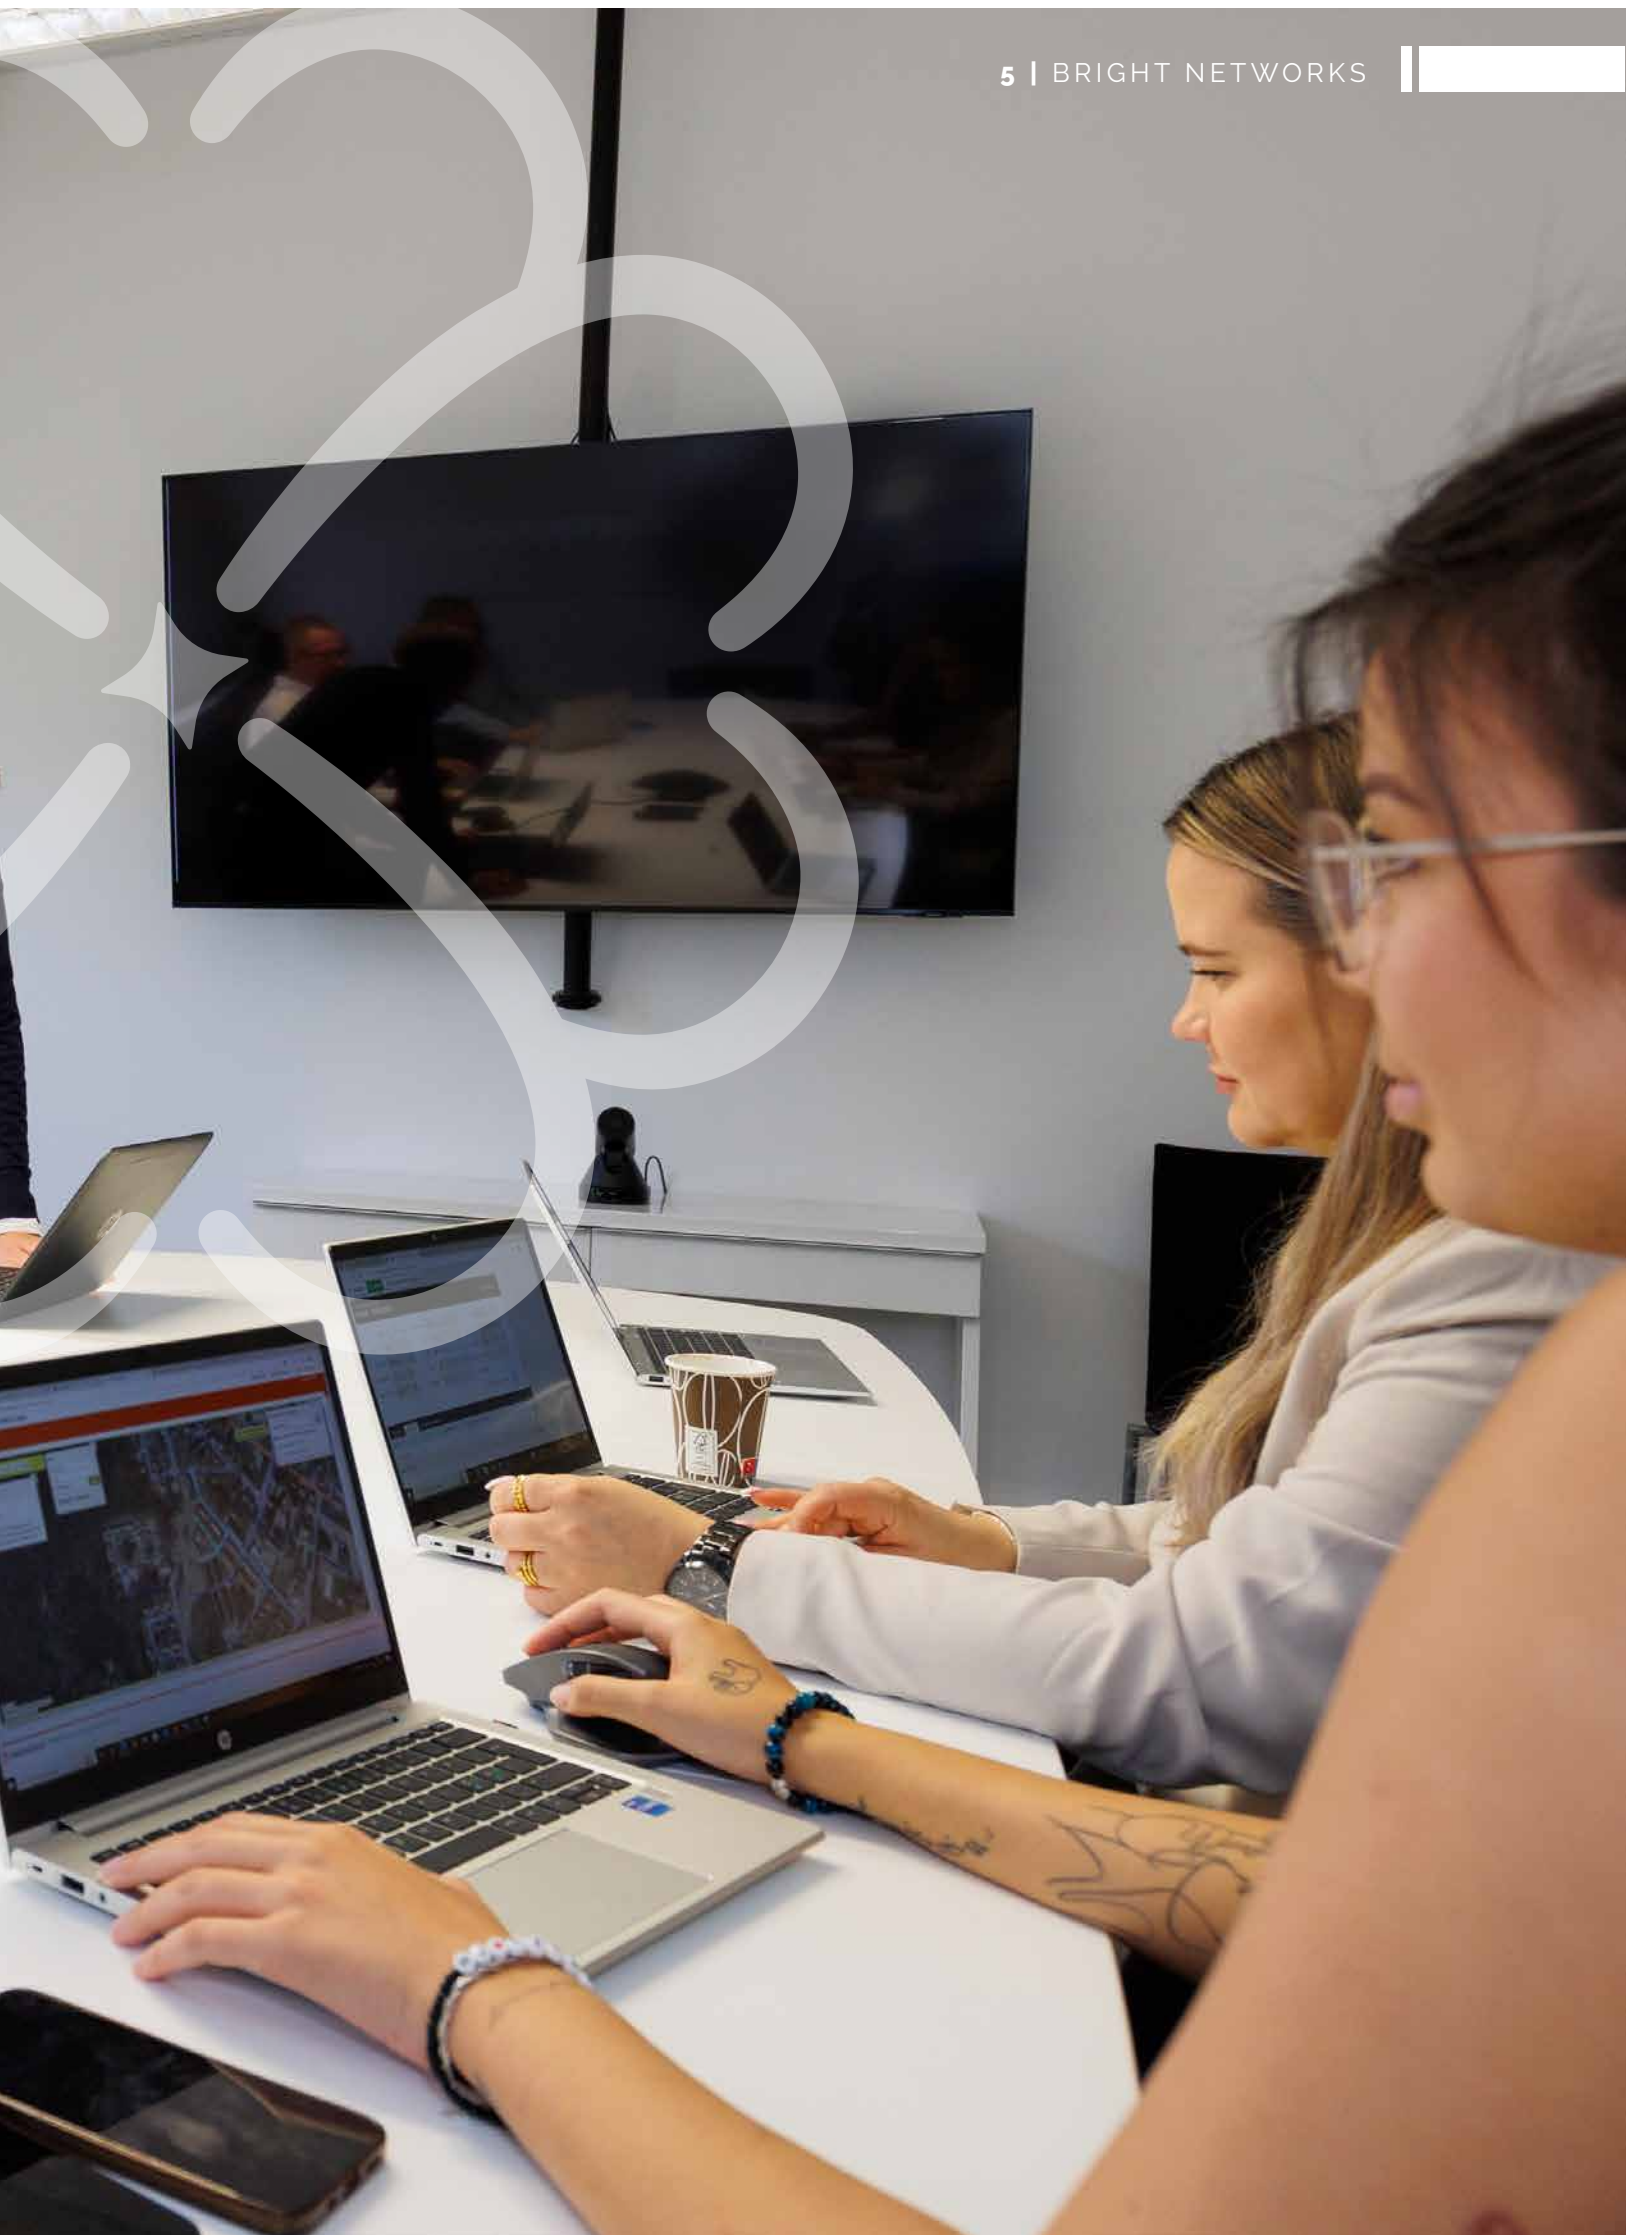

Project management & Project planning

At Bright Networks, no task is too large or small. We approach all challenges and project with the same professionalism and deliver with the same precision. We offer our customers services in project management and project preparation as a way for us to offer you a secure complete solution where you can hand over responsibility for the contract and stay as involved in the project as you wish.

Our project managers and planners are in many ways a key factor in creating the conditions for a successful project flow. This is where we ensure that all permits are sought and that we can deliver within the set time frame. The value for you as a customer is that you can hand over your project to an expert with full control over the entire process and avoid having to contact several different people regarding the project. We build the turnkey solution and take full responsibility for the production.

Through your contact with Bright Networks, you will also discover that we place great value on being service-oriented. Our approach is that we achieve success through collaboration and responsiveness. The project implementation includes regular contact with municipalities, landowners and other stakeholders – cases where it is vital that we treat everyone in the same way we ourselves want to be treated; with service awareness, respect and professionalism.

The right fleet for the job

In order to be the flexible and fast-paced organization that we strive to be, Bright Networks has a wide variety of mechanical equipment. The majority of our assignments mean that we need to excavate to meet our commitments, and through our modern fleet we can take on everything from large contracts to the smallest service assignment.

Our machines are particularly suitable for work in cities and we have high competence and extensive experience in digging in complex environments. Our customers have understandably high demands, and it is important for us to meet those needs with the right equipment and the right skills. At Bright Networks, we carry out assignments that take anywhere from an afternoon to several months to complete.

UMA

Fiber engineering

The technical fiber work is the core of everything we do and a big reason why Bright Networks stands out in the market. Our high level of competence comes in handy with senior certified fiber technicians with extensive experience and the competence to handle even the most complex assignments. We carry out all types of fiber engineering work where we use the latest and most modern equipment on the market.

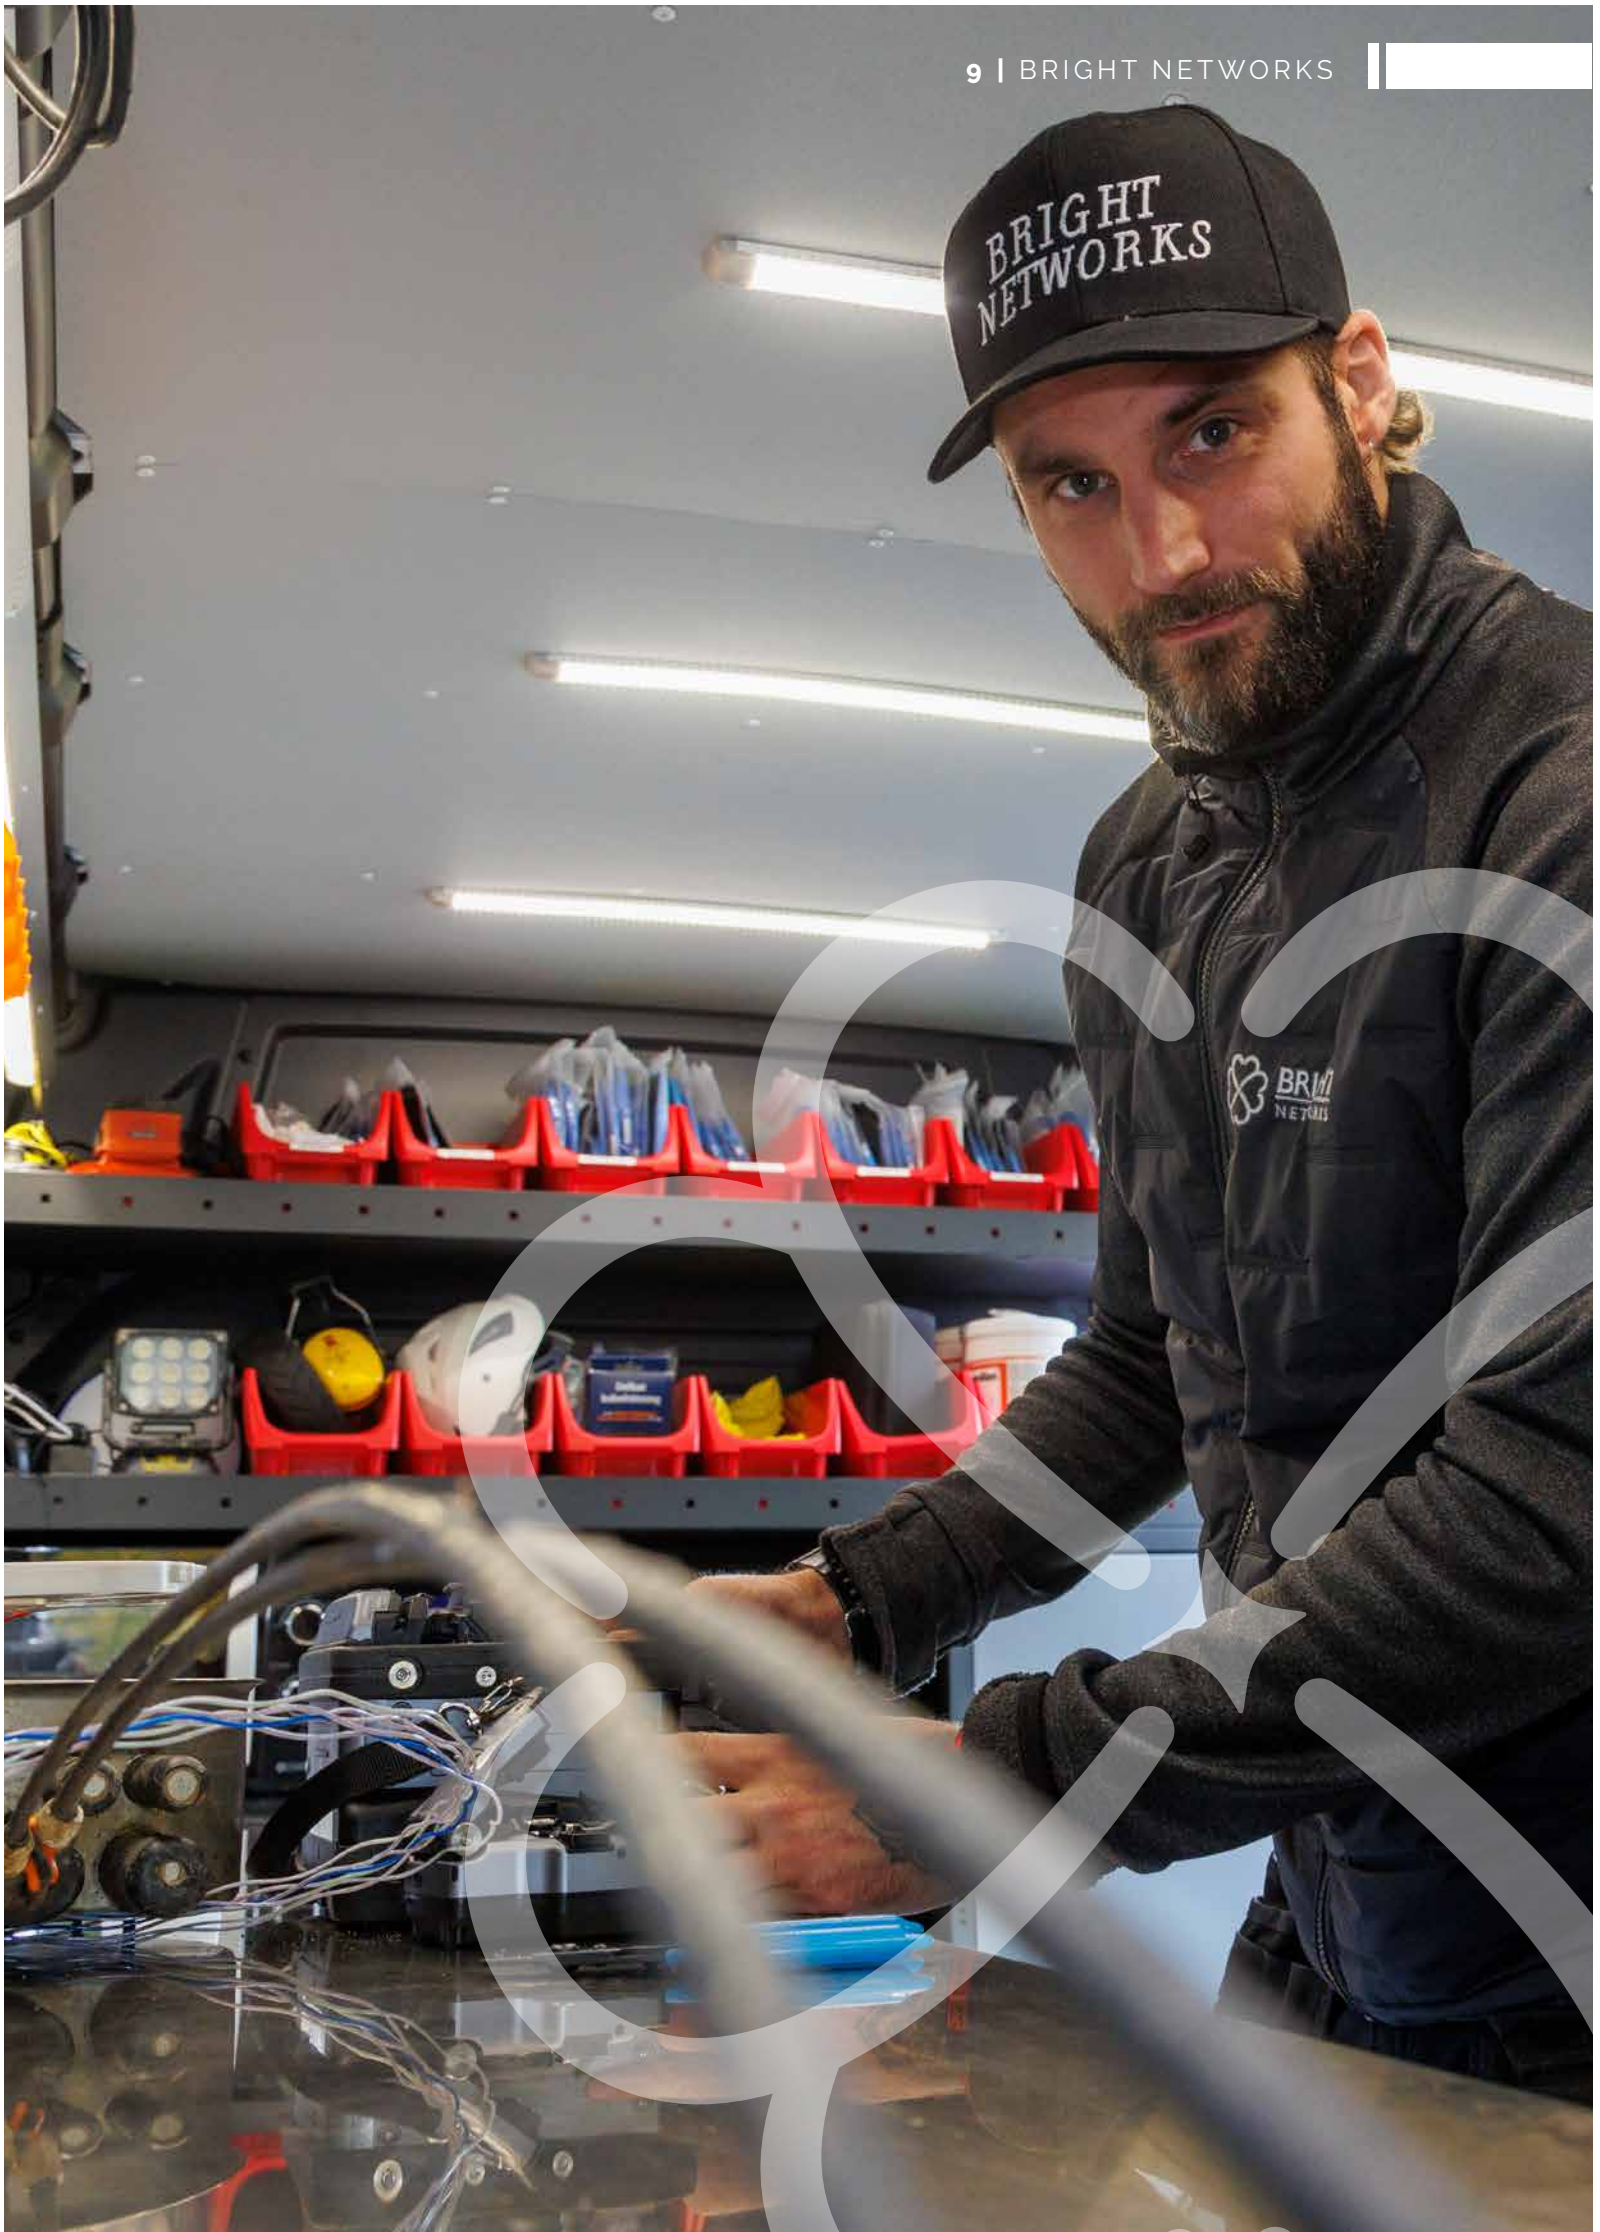

Examples of equipment that we use:

- Fujikura – The latest core alignment and ribbon fusion splitters on the market
- EXFO – OTDR with 46dB in dynamic range and 1310, 1550 and 1625nm
- EXFO – PMD/CD instrument
- EXFO – Microscope probe, FIP-435B
- Audio Fiber Tracer – for troubleshooting in active networks

Competence development and training

We ensure that we maintain our market-leading position through ongoing competence development and training of the staff. In fiber technology, working methods develop a lot from year to year, and in order to always be able to maintain a competitive offer, we hold regular competence days and have a large internal competence exchange.

Cable blowing & Subducting

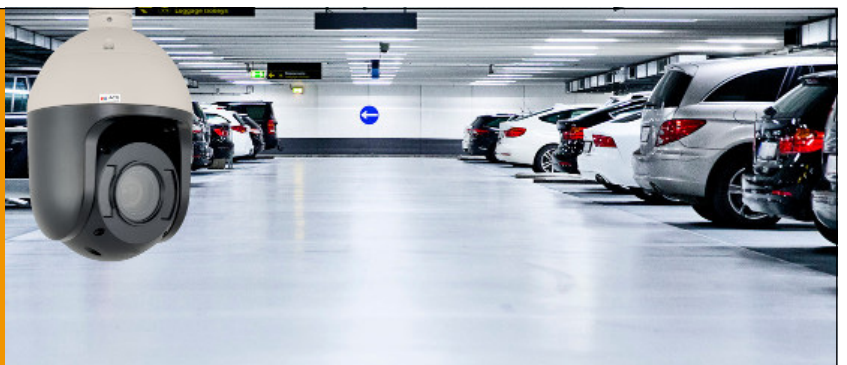

Bright Networks specializes in strengthening existing networks via subducting, cable blowing and cable floating. We carry out cable jetting of all types of micropipes in pre-installed existing PE pipes, and, with cable machines from Plumettaz, we make sure to maintain the highest possible quality for blowing and floating of fiber cable and microducts. At Bright Networks, we can also use winches for Subducting and hydraulically operated stick feeders. We can subduct in existing ducting and carry out all types of cable blowing in all types of pipes and dimensions.

Vi är en distributör och grossist med yrkesbutik i Sundbyberg, Stockholm samt Uppsala. Vårt arbetsområde är inom infrastruktur för Fiber, Data & tele samt Skydd/Säkerhet. Försäljning sker endast genom våra ÅF.

Vi har även en av Sveriges största uthyrningssortiment Med inriktning: Fiberblåsning, fibersvetsning, inmätning och certifiering av kopparnät samt fibernät.
