

# World-Class User-Friendly Systems and Services

#### FACTS

- Founded in 1954, pushing boundaries in the sawmill industry for over 70 years
- Swedish company with core markets in the Nordics and Baltics
- Also exporting to the rest of Europe and the USA
- Large installed base with over 1,000 satisfied customers
- Proprietary development of cutting-edge technology
- 50+ employees

#### WHAT YOU GET WITH REMASAWCO

- Swedish supplier with operations based in Sweden
- Enhanced yield through premium sawmill solutions
- Modern yet reliable technology based on established standards
- World-class service and support
- A complete offering with intelligent and user-friendly solutions

**For RemaSawco, supporting the UN's global goals for a sustainable society is a given!**

Message from the CEO –  
RemaSawco is preparing for the  
Future

Leading RemaSawco is both a privilege and a great responsibility. As a key player in the Swedish sawmill industry since 1954, we carry a legacy of innovation and quality. Our origins in Rema Control and Sawco have laid the foundation for the company we are today—one that constantly adapts and evolves to meet the industry's needs and challenges.

In recent years, RemaSawco has undergone a major transformation. We've made significant investments to strengthen our service and support—critical areas for our customers' success. This journey hasn't been without challenges, but those very experiences have made us stronger. Today, we are a stable, thriving, and growing company with a clear strategy for the future.

Digitalization and data-driven solutions are the key to the future of sawmilling, and RemaSawco is at the forefront of this development. Our new, future-proof Log Sorting Station sets a new standard for strategic data collection early in the production process, enabling optimization across the entire sawmill value chain.

Meanwhile, industry challenges like raw material shortages and rising prices make optimization an absolute necessity. Efficient resource usage is no longer just a competitive edge—it's a matter of survival. We're proud to offer solutions that help our customers become more profitable, efficient, and sustainable.

I look to the future with confidence—for both RemaSawco and our customers. Together, we can create new opportunities in an ever-evolving industry. I truly hope we'll have the opportunity to meet in the future and continue the dialogue on how we can contribute to your success.

Emilien Saindon  
CEO, RemaSawco AB

# The Future of Log Sorting is Here – A New Era for the Sawmill Industry

RemaSawco proudly presents the next generation Log Sorting Station – a modern solution that combines proven performance with future-proof technology. Our new measuring station is designed to meet today's needs while being ready for tomorrow's challenges.

## Modular Design for Maximum Flexibility

The new Log Sorting Station is built on a smart and modular architecture, meaning it can be easily adapted and upgraded in line with your specific needs—as well as evolving requirements and technologies. With separate modules for 3D measurement using laser and X-ray, users can tailor the solution to their exact needs, whether for indoor or outdoor environments.

## Intuitive User Interface and Robust Operation

A new, flexible user interface with centralized login and role management makes it easy for operators to monitor and control the process. The stable and secure power supply via full UPS, combined with a robust computing solution, minimizes downtime and ensures continuous production.

## AI-Ready and Built for Future Automation

The solution is already equipped with AI-driven quality grading features and prepared for a future of advanced automation. Our vision of an operator-free measurement station is well on its way, and this platform is a major step in that direction.

## Fast Commissioning and Easy Integration

The new Log Sorting Station is designed for quick deployment, reducing production downtime during installation. It's also compatible with existing systems, making integration smooth and cost-efficient.

### Key Features of RemaSawco's New Log Sorting Station

- Modular design for easy customization and upgrades
- Separate modules for 3D and X-ray measurement
- New UI with central login and role management
- Stable power via full UPS
- AI-ready for future automation
- Fast deployment and seamless integration

## Specialiserade på rackskåp, kapslingar och fiberoptiska produkter

- Rackskåp och kapslingar för inomhus och utomhusbruk i standard och kundanpassat.
- Vi utför installation av tillbehör och utrustning i skåpen innan leverans om så önskas.
- Fiberoptiska produkter som Breakout fibertrunk, MTP/MPO kablage och kassettsystem, patchkabel och ODF:er mm till företag inom IT och industri.

# ATA Timber Rörvik – A long-term partnership for the future

**ATA Timber Rörvik has chosen to further strengthen its production capacity by upgrading its log sorting and measuring station with RemaSawco's modern solutions. This renewed trust clearly confirms the long-standing partnership between the two companies.**

RemaSawco's technology, known for reliability, precision, and user-friendliness, has proven to be a valuable asset in ATA Timber's production. This latest upgrade is no exception.

– We are very satisfied with our choice. The system is user-friendly, accurate, and reliable – and we feel secure with RemaSawco as our supplier, says Lars-Johan Svensson, CEO of ATA Timber Rörvik.

The installation includes advanced measurement technology and integrated automation solutions that optimize the production flow and ensure high product quality. By modernizing log sorting, ATA Timber boosts efficiency and competitiveness in a dynamic industry.

RemaSawco is proud to continue contributing to ATA Timber's technological advancement. Our expertise in digitalizing sawmill processes, combined with close project management, ensures results and peace of mind.

## Outcome

**The investment in a new Log Sorting Station from RemaSawco has provided ATA Timber with several key benefits:**

- More accurate measurement – enables optimized sawmill production
- More efficient sorting – better raw material utilization
- User-friendly system – short learning curve for operators
- Improved work environment – thanks to RS-FlexCon chair and clear display interfaces
- Fast, effective support – in Swedish

# New Small log line at Moelven Valåsen – RemaSawco as key supplier

In 2024, Moelven Valåsen began construction of a completely new small log line – a major step toward becoming a fully digital sawmill. RemaSawco was selected as the key supplier for a unique system that has helped Moelven connect all parts of its mill, says Development Engineer Ahmed Nasrullah.

- We know RemaSawco is a reliable, long-term partner. This project was extensive, so we needed innovative, forward-thinking suppliers who we could collaborate well with,” says Nasrullah.

Ahmed describes RemaSawco as a partner that’s easy to find solutions with. The project involved open dialogue and mutual challenges of ideas to create the best possible outcome.

- We’ve broken new ground together. With RemaSawco, we developed new production methods and new ways of thinking, improving yield, quality, and productivity, he continues.

The new small log line allows Moelven Valåsen to increase its annual production by one-third – to over 500,000 cubic meters.

- The dynamism, flexibility, and structure RemaSawco brought to the table worked incredibly well. Open communication led to tangible results in the systems we developed together. RemaSawco was highly responsive, and that helped us create more efficient solutions, says Ahmed Nasrullah.

Vi levererar olika typer av el-utrustning, från små kopplingslådor till stora golvsåp. Vi gör även installationer och ombyggnader på plats.

Vi håller högsta möjliga kvalitet på våra produkter och tack vare ett nära samarbete med våra kunder och att vi är flexibla kan vi snabbt få med ändringar och nya önskemål som våra kunder har.
